About me

Senior Software Engineer (3 years in the field) with good experience in AWS and devops, passionate about back-end programming and infrastructure development. Main programming language is Java, but also use Python a lot and have knowledge of low-level programming (C, Assembly). Learned distributed systems design using Kafka (event sourcing model). Also spend some time on devops tasks (configuring docker compose deployments, AWS cloud configuration, CI pipelines).

Experience

2019 –present: **EPAM Systems Inc.** Developing back-end systems for a large e-Commerce platform. Worked with reactive technologies using Java and Kotlin: RxJava and Vert.x. Performed BDD testing with Cucumber. Configured performance tests with Gatling. Was involved in product planning with customer: business trips, wave planning. Worked with several projects (switched between) to efficiently use personal capacity and knowledge and evolve the overall system.

2017 –2019: **Intetecs Inc.** Working on a financial analytical SAAS project. Main areas of responsibilities are backend written in Java (API for the platform), infrastructure configurations (AWS) and devops (Docker, CI/CD pipelines, Ansible).

Skills

- Java, Kotlin, Python, SQL, Bash
- Spring Framework, Maven, JUnit
- Docker, Ansible, Terraform
- Kafka
- Amazon Web Services
- Linux
- REST, TDD, SOLID
- HTTP, SSL
- Algorithms & Data Structures

Education

Bachelor degree in Computer Engineering – State University of Telecommunications (Kyiv, Ukraine)
