About me

Senior Software Engineer (4 years in the field) with devops experience, developing back-end systems in Java. Apart from Java, know other programming languages such as Kotlin, Go, and Python. Also, I am in a Team Lead role on a current project. Learned distributed systems design using Kafka (event sourcing model). Have a blog and several pet projects written in Java & Go.

Experience

2019 – present: **EPAM Systems Inc.** Developing back-end systems for a large e-Commerce platform. Worked with reactive technologies using Java and Kotlin: RxJava and Vert.x. Performed BDD testing with Cucumber. Configured performance tests with Gatling. Was involved in product planning with customer: business trips, wave planning. Leading a team of 6 engineers.

2017 – 2019: **Intetics Inc.** Working on a financial analytical SAAS project. Main areas of responsibilities are backend written in Java (API for the platform), infrastructure configurations (AWS) and devops (Docker, CI/CD pipelines, Ansible).

Skills

- Java, Kotlin, Python, Go, SQL, Bash

- Spring Framework, Vert.x, Maven, Gradle

- Junit, Cucumber, Gatilng

- Docker (Docker Compose), Jenkins

- Kafka

- PostgreSQL, MySQL, MongoDB

- Amazon Web Services

- Linux, Git

- REST, TDD (also BDD), OOD

- HTTP, SSL

- Algorithms & Data Structures

Education

Master's degree in Computer Engineering – State University of Telecommunications (Kyiv, Ukraine)
